Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/811,984	Applicant(s) YOSHIKAWA ET AL.	
	Examiner KIMBERLY T. WOOD	Art Unit 3632	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 June 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

Art Unit: 3632

This is an office action for serial number 10/811,984.

Election/Restrictions

Claims 11-3, 15-17, 19, and 20 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on June 12, 2009.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the receiving member must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet,

Art Unit: 3632

and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 3, 5, and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fariello 1,858,144 in view of Tanaka et al. (Tanaka) 4,786,999. Fariello disclose discloses a

Art Unit: 3632

tank main body (12, conventional heat accumulation tank is cylindrical member), an elastic member/soft material (13, based suitable friction lining would include elastic material), a receiver member (25), a mounting member has a band (10 and 11) having a wide portion (where the bracket is attached via spot weld area near number 10 in figure 5), a bracket (26) at a spot weld zone/wide portion (where the screws attach to the band at a location serving to prevent uneven surface pressure on the middle third portion of the band in the width direction as shown in figure 5) . Tanaka discloses all of the limitations of the claimed invention except for the spot welding of the bracket at this location serving to prevent uneven surface pressure on the middle third portion of the band in the width direction. Tanaka discloses spot welding of the bracket at this location serving to prevent uneven surface pressure on the middle third portion of the band in the width direction (11). It would have been obvious to one having ordinary skill in the art at the time of the invention to have modified Fariello to have included the spot welding of the bracket at this location serving to prevent uneven surface pressure on the middle third portion of the band in the width direction as taught by Tanaka for the purpose of providing a more secure means of attachment preventing accidental connection.

Allowable Subject Matter

Claims 6, 7, 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claims 1-3, and 5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The prior art discloses conventional means of attaching being spot welding and bands for attaching to tanks.
